

Using the steam wax extractor

Dear User,

For your own benefit and that of other borrowers, please note the following points before using the extractor:

- * Please do check that the boiler has sufficient water at all times during use. Boiling dry compromises the element, just as with an electric kettle.
- * Please do not put your wax directly into the basket. Use a filtering material (the leg of a pair of tights; a piece of muslin; an old tea towel, piece of bed sheet, or even a wrapping of kitchen paper).
- * Please do be aware that lots of debris will come off the wax as it melts. Your filtering material will need to be changed regularly for your end product to be properly clean.
- * Please do clean the equipment thoroughly, before returning it to the equipment store. If you have used filtering material, this will be much easier, as less of the wax debris will have attached to the extractor tank.
- * When packing the equipment to return it, do check that you have included the lead.

Cleaning:

- * Please use a hot water and washing soda solution to get the best results.

Here's hoping you have received this equipment in good condition and have a good quality end product from using it. If there are any problems, please contact: Linda (lindafoundthepot@talktalk.net/07887053639)
